1. Things That Went Well

We were able to complete almost two sprint backlog items with high story points that were managing Admin and User accounts and Processing payments. We also completed the unit testing for each of the mentioned modules and we have a good-looking UI and database setup.

2. Things That Could Have Gone Better

We missed out on 2 items this time as well because of the setup and testing of payment modules. The two items those were left behind would be covered in the upcoming sprints. Generation of reports and transaction history for users, these were the two items that were not completed (PBI 2 and 7 respectively).

3. Things That Surprised Us

While integrating the payment API, we got stuck several times due to the major update of stripe platform and hence no latest video tutorial was available online for us. No good resources were found and due to this we had to spend much more time on this task.

4. Lessons Learned

Learned how to carry out and manage software development project tasks in a team. One of the outcomes was also that as a team we learned how to carry out a project in an agile manner.we learned to manage our time as different team members had different availability and with projects of different subjects on head simultaneously, we learned to manage our time and resources.

5. Final Thoughts

Tasks which are completed need to be reviewed by the product owner and if implemented correctly we will move forward with the remaining tasks.

Uncompleted tasks are moved to the next sprint
